North South University

Department of Electrical & Computer Engineering

PROJECT PROPOSAL

Course Code	CSE311L
Course Title	Database Systems Lab
Faculty Name	Ms. Tanzilah Noor Shabnam [TnS1]
Lab Instructor	Md. Amanullah Shah
Section	6
Group Number	7
Date of Submission	13/3/2026
Group Members Name & ID	Mehejabin Nur 2231478642 Amrin Salamun Khan 2233651042 Md. Mehedi Hasan 2233674642

Project Proposal — Submission Form

1. Project Title & One-Line Description

A Dengue Tracking System which is a fully functional relational database schema specifically designed for multi-hospital dengue surveillance.

2. Problem Statement

By populating data into a common DBMS, Doctors can easily access a patient's platelet records and their treatment history. Lack of a unified database leads to delayed treatments, redundant lab tests and a complete 'Blind Spot' for public health officials monitoring national bed capacity. By consolidating data in a common database, doctors can keep track of the patient's platelet records. While Nurses and Data Entry Staff follow a standardized protocol for monitoring vitals.

3. Core Features / Scope

- Users include Doctors and Nurses.
- The DBMS uses mandatory national ID to link records across all clinics and hospitals.
- It eliminates the scope for double counting patients and ensures a single continuous medical history even if the patient is referred to multiple by facilities.
- It categorizes cases by Dengue types (Classic vs. Hemorrhagic) and severity levels (Mid to critical, allowing doctors to prioritize high-risk patients and analyze outcome trends (Recovered vs. Died).
- Keeps track of the blood type and platelet count data, which can be used to identify patients in urgent need of transfusions and match them with hospital resources and matches them with hospital resources or potential donor pools.

4. Team Roles

Student Name	Student ID	Role
Mehejabin Nur	2231478642	Database Implementation and CRUD+DB integration
Amrin Salamun Khan	2233651042	CRUD+DB integration and ERD & Schema Design
Md. Mehedi Hasan	2233674642	CRUD + DB Integration and Web UI
